```java
public class constructorDemo
{
        public static void main(String[] args) {

                EmpInfo emp1=new EmpInfo();
                EmpInfo emp2=new EmpInfo();

                emp1.display();
                emp2.display();
                }
        }

        //parameterized constructor
        class Std{
                int id;
                String name;

                Std(int i,String n)
                {
                id=i;
                name=n;
                }

                void display() {
                System.out.println(id+" "+name);
                }
        }

        public class constrDemo
        {
        public static void main(String[] args) {

                Std std1=new Std(2,"Alex");
                Std std2=new Std(10,"Annie");
                std1.display();
                std2.display();
                        }
        }
